

 **wolf montage**  
— At home in the industry

Tell us which area of everyday work you want to facilitate and we offer such engineering solutions that can increase your efficiency to tenfold.

Let us gain insight into your industrial environment to assess your needs, and our company offers a technology solution that does not require any expertise or maintenance.

Our goal is to provide technical support that facilitates the work of non-skilled people, thus creating the potential for development and prosperity in the region.

Our company undertakes the construction of systems that transform the renewable resources of nature into the essential energy of everyday life, thus exempting the Earth and our environment from continuous pollution.

**Our company employs trained, reliable technicians and experts with many years of experience. Besides the assembly of special machines, production line installation, relocation, repair and maintenance, we also deal with software solutions from installation to system formation. We offer complex solutions in warehouse technology and logistics with the help of our business partners. Our personalized approaches, based on sufficient examination of market and our partner's needs, we make our clients more effective and competitive. We provide thorough solutions for our partners in the field of welding technology, as well.**

### Activities:

- Special machine assembly, installation, repair, maintenance
- Installation, relocation, repair and maintenance of industrial equipment, production lines, paternoster and automated warehouse elevators
- Installation, repair and maintenance of lift systems
- Complex solutions for industrial and warehouse planning and construction
- Aluminium and plastic profiled workstations and manufacture of special server units
- Engineer designing and consulting
- Design and manufacture of unique superstructures, devices and machines
- Sale of warehouse and industrial software and software consultancy
- Foreign and domestic lease-work
- Qualified welding works

### Representation:

### Special equipment assembly, installation, repair, maintenance

Our company – as the official partner of Kardex Hungaria Ltd. - mainly deals with the installation, repair and maintenance of warehouse automats, in Hungary, Germany and occasionally in other countries.

### Personalised products, superstructures, purpose machines, engineer support

With our trusted engineers and technicians, we aim to serve the needs of our partners with personalised products. We undertake engineer design, support, 2D and 3D drawing either in the form of wage work or outsourcing at one of our premises or at the customer's site. In the field of welding technology, we support the work of our clients by welding engineering consultancy, welding basic and further training and welding equipment design.

**Sheet material container**

The sheet material container superstructure is equipped with rubber spikes, among which desired materials can be stored into closely, let it be plastic or metal sheet parts. The rubber protects the surface of the products from any scratches or damage. This superstructure is wholly customized to the specific needs of the customers.

**Roller superstructure system**

The roller superstructure system can be used for moving of heavy parts, highly easing the movement in the tray. Dock car can be added to it as an accessory and with help of it, products can be moved conveniently during transportation within the factory. Grooves are established on the roller sheets, in which fastening bars can be placed for positioning of the products.

**Roller holders**

Textile and clothing industry has problems with storing large rolls. This superstructure is intended to facilitate this. The rolls along with the storing axis can be placed and freely removed from the tray. Depending on the size of the rolls, longitudinal and lateral storing is also possible. Due to the openable drums which are placed on the edges of the structure, rolls can be fixed during storing.

**Frame storage**

We developed this superstructure for thin, large surfaced, but valuable products, which is equipped with roller lines in the lower plain in the interest of the ease storing. The front, openable door provides safe movement.

**Custom trolley**

We have manufactured custom trollies that we have designed specifically for fulfilling the certain tasks.

**Rail rack superstructure**

Easy-to-use superstructure for storing products with more than one side hanging elements.

**Interlocking fastener components**

This superstructure is suitable for those products and tools which were built on a given size of platform, so all the tools can be stored in the same way, without affecting the upper functioning part.

**Vertical roll holders**

With the help of the locking jaws, the complex shaped products can be also easily fixed after storing. The spring-loaded latches provide maximum security to avoid operator errors. This superstructure is entirely constructed from special materials, an ESD-compliant and ultra-light plastic.

**Unique tray booster with door**

When storing in a warehouse automation, it is often necessary to raise the trays, possibly with a door. While creating such tray booster frame, it is always important to have a durable and stable construction, tailored to the customer's intended use.

**Records storage supplementary**

The basic purpose of records storage supplementary is the elimination of the office folder storing. Suitable for fixing the stored data line by line, preventing them falling over. We offer multiple solutions for fixing, from simple to complicated solutions.

**Tray-divider**

The tray-divider is the accessory of the Shuttle XP, Shuttle XPlus and the other lift system warehouse automats. With the help of the divider, the trays can be divided flexibly into separate units in seconds, but still using a secure fixation. We can create our own, suitable distributed trays for the changing needs, which can be optimized for the products to be stored. The tray-divider is available in almost every sizes and is fully customizable. It is accessible in single or multi-line version, adequate for the needs and circumstances.

**Plastic tray-divider system**

The advantage of this superstructure, compared to the metal one, is the easier assemble and favourable price.

**Combined tray-divider system**

It combines the advantages of the metal and plastic design. Different needs of the storage method can be achieved within one tray.

**Aluminium profile systems**

Thanks to the unlimited possibilities offered by the aluminium profile systems, almost any structure and system can be assembled with these elements so that it can be easily combined with other components such as roller rows. We work with several types of profile systems, so we can fit into any existing system with new structures we design.

**Custom workshop stations**

We have facilitated the work of a great number of our partners with ergonomically designed custom workshop stations. The planning procedure for such projects begins with complete data assessment to ensure smooth and uninterrupted workflow at the workstations, allowing for the most time and work efficient process possible.

**Plastic containers, boxes, pallets**

**Storage boxes, without which storing is impossible!** In our diverse selection we offer a variety of foldable, open front and closed containers, as well as their respective counterparts: compact transport trolleys and lightweight pallets.

**Metal containers, spill pallets, hazardous material containers**

**Metal containers, without which storing is also impossible!** We provide eco-friendly and efficient storage solutions through a wide range of metal containers. Options for storing barrels, gas tanks and parts of various size are also available.
